Specialist advice on plant suitability

-

Our designs are contemporary, functional and stylish

At Green Inspiration we design a contemporary, functional & stylish interior plantscape tailored to your individual needs. The initial design meeting is the ideal time to discuss your needs and the indoor environment. Green Inspiration take several photos of your interior space, which are used to compile a design proposal for indoor plant hire and service. All our design proposals are provided completely obligation free.

Our unique software allows us to design a photo image incorporating plants and containers specifically chosen from our wide range available. The proposal can be emailed to you within hours of our meeting, thus allowing the job to be done as quickly and easily as possible. The photo images really allow you to visualise the product you will receive from Green Inspiration.

As part of the design process we take great care to note the colours of your company logo and the interior decor, the interior space shapes and sizes, light levels and location of airconditioning vents and windows. These are all essential in determining the best plant and container selections to achieve the most functional and stylish design.

The design will incorporate plants and container styles to send a powerful message to your customers and staff. The corporate theme and culture will be inherent in the design and it will integrate beautifully with your interior decor. Plant selection is vital in contributing to the look and feel of the design, but also to maximise the health benefits provided by indoor plants. Our specialist knowledge of indoor plants is utilised to ensure that plants chosen will flourish in the specific indoor conditions of your office or home.

The final result will be a contemporary, functional and stylish design of stunning plants unique to your business or home!
